DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement/s (IDS) submitted on 1-10-2007 was considered by the examiner.

Claim Objections

2. Claim 18 is objected to because of the following informalities. Claim 18 recites the limitation "the contacting member" in line 1. There is insufficient antecedent basis for this limitation in the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2852

5. Claims 15 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (JP05-197254A) in view of Mori et al. (JP2001-338551A). Suzuki teaches a voltage supply device for developing devices of a color image forming apparatus, the voltage supply device comprising: a printed circuit board (PCB) connected with a high voltage supply source; a plurality of PCB input terminals and a plurality of PCB output terminals provided at the PCB; a plurality of fixed contact point terminals provided to one end of the color developing devices; a plurality of terminal connecting parts connecting the PCB output terminals and the fixed contact point terminals; and a plurality of voltage changeover units comprised of a solenoid part which selectively applies voltage to the PCB output terminals to selectively supply the voltage from the high voltage supply source to the respective color developing devices.

Suzuki does not teach that the plurality of voltage changeover units comprised a solenoid part.

Mori teaches a solenoid is conventionally used to switch or changeover a voltage supply. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teaching of Mori et al. with the image forming device of Suzuki to provide a switch which is capable of operating with small capacity (Mori et al., abstract: lines 1-5)

Prior Art

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato teaches pertinent prior art.

Allowable Subject Matter

Art Unit: 2852

7. Claims 16-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 7 and 9-14 are allowed.
